

NWR: Superuser functionality

Getting to know the thresholds page

The 'Thresholds' page allows the Superuser to set Red Amber Green status thresholds specific to their organisation.

Set thresholds by either inputting weather limit values or clicking the coloured buttons to scroll through Red Amber Green.

Please note: threshold changes will only apply to the map when the next set of METAR reports come through.

On the map, squares indicate the status of a TAF, circles indicate the status of a METAR. The colours displayed are triggered by what has been set in the threshold page.

Hovering your cursor over the abbreviations will display the full term.

Highlighting colour coding

Red	Severe	
Amber	Moderate	
Green	All clear, no highlighting applied	
Grey	Expired or NIL report	
White	No data available	

If you have any issues, please contact **0370 900 0100**.
